

A True Philadelphia Story.

ABCO helps bring America's oldest residential street into the 21st century.

When Ramone Hernandez was called to replace a heating system at 123 Elfreth Alley in Philadelphia, the owner of R&R Mechanical Services enjoyed the fact that he would be replacing a system on the oldest street in America with one of the newest, most efficient **Mitsubishi** systems in existence. "Elfreth Alley dates back to the early 1700's," says Hernandez, whose company specializes in tenant HVAC and plumbing construction. "The house we were called in on had a twenty-year old conventional heat pump system— not as old as the house, but ancient in terms of efficiency and performance. We replaced it with two **Mitsubishi Hyper Heat Systems**, PUZHA36NHA2 (w/PEADA36AA4) and PUZHA30NHA2.

The units can operate with better performance than ever before, with low sound levels. Mitsubishi's patented Hyper Heat technology allows 100% of heat capacity down to 5°F outdoor temperature. Installation is quick and easy, with no need for major construction.

The house—123 Elfreth Alley—was built in 1802, according to Mike Motyzcka, Sales Account Manager for ABCO's Philadelphia branches. "We were pleased to play a part in this 'Philadelphia Story'. The thirty houses on Elfreth Alley form one of the last intact streetscapes in America. Thanks to R&R Mechanical, #123 now has one of the most modern heating systems on that historic street."

ABCO is the largest and most resourceful distributor of Mitsubishi CITY MULTI® systems and Mr. Slim style units in the United States.

Guess what else the newest Green Choice™ motors can make greener?

Your bottom line. Introducing AO Smith's latest eco-friendly motors offering huge energy savings for the Refrigeration market. Save time and money. Add versatility to your replacement motor inventories. Be equipped to replace hundreds of OEM shaded pole evaporator fan motors.

iMotor™ Refrigeration Motors Stock number 9207F2 (and 9208F2) is a new high efficiency, multi-watt output replacement, unit bearing, electronically commutated motor (ECM). Your customers can save up to 65% in energy usage or thousands of dollars for a typical supermarket.

3-in-1™ Stock number 9721 is a new high efficiency, multi-horsepower, replacement 3.3", permanent split capacitor (PSC), ball bearing, reversible, dual voltage motor. It can save your customers up to 50% in energy usage.

For more information and to get the motors you need, contact your ABCO Branch Team or Sales Account Manager.
